

Cofense PhishMe is the leader in frontline employee security awareness training (SAT), equipping your workforce to be a resilient and effective part of your cybersecurity defense.

Your Problem.

Employees are your last line of defense against phishing threats, but they're facing more sophisticated attacks than ever before. Even with tools like secure email gateways and Integrated Cloud Email Security, up to 50% of advanced phishing attacks slip through. Today's threats aren't limited to email; attackers exploit multiple channels like QR codes, vishing, and smishing to deceive employees into exposing sensitive information. Traditional security awareness training isn't enough to combat these tactics. Without continuous, real-time reinforcement that's tailored to evolving threats, employees remain unprepared to identify and report the attacks that bypass technical defenses.

Our Solution.

Cofense SAT, powered by PhishMe, complements existing email security defenses by enhancing employee resilience to phishing threats. Leveraging human-vetted intelligence and data from over 35 million trained users, Cofense delivers highly threat-relevant phishing simulations that mirror real-world threats, ensuring employees are always prepared for the latest tactics.

**COFENSE PHISHME PIONEERED THE SAT INDUSTRY
IN 2008, AND BY 2024, WE HAD DELIVERED**

**OVER
ONE BILLION
EMPLOYEE TRAINING SIMULATIONS.**

Through an approach based on human risk data elements and a broad range of training content that evokes behavioral change, Cofense fosters quick, accurate reporting, strengthening the human layer of defense. With our innovative multi-channel communication simulators, such as vishing and SMS phishing, and our callback phishing service, Cofense helps organizations build resilience to a broad range of threats.

Why Choose Cofense SAT?

Empower employees to recognize and report **real-world phishing** threats using simulations based on exclusive threat intelligence from a global reporting network of 35M+ trained users.

Address gaps that technology can't catch by teaching employees how to defend against threats across email, SMS, QR codes, and other channels.

Enhance organizational readiness with dynamic, **behavior-focused training** tailored to evolving phishing techniques.

Provide C-level visibility with **actionable insights and reporting** designed to measure and communicate program effectiveness.

EXCLUSIVE FEATURES OF COFENSE SAT

One-Click Threat Reporting

Directly address the problem of poor employee engagement with an integrated, single Reporter button with real-time feedback to eliminate user confusion – driving faster, more consistent reporting across the organization to build resiliency from day one.

Metrics That Matter

Cofense reporting and analytics empower organizations to measure the full scope of human risk, providing actionable insights to refine training and improve response strategies.

Engaging, Multi-Channel Content Library

Cofense delivers dynamic, real-time training on phishing threats beyond email with an ever-evolving content library to solve the issue of stagnant, irrelevant content by ensuring training remains dynamic, up-to-date and tailored to emerging threats.

Immediate Engagement with Responsive Delivery

Cofense's Responsive Delivery ensures simulations occur when users are live in their inbox, increasing engagement and removing the need to worry about randomized delivery of simulations.

Cofense is the only cybersecurity company leveraging expert-supervised AI for phishing detection and response—delivering human-vetted intelligence and real-world training to help enterprises stay ahead of modern threats. Built to augment existing email defenses, Cofense identifies attacks that bypass perimeter filters, remediates them in minutes, and continuously strengthens the human layer through simulations modeled on active phishing campaigns. Informed by insights from over 35 million trained users, Cofense enables faster containment of threats and measurable reductions in risk. Organizations like Visa, Siemens, and Blue Cross Blue Shield rely on Cofense to reduce exposure, meet regulatory demands, and build lasting resilience against the most persistent cyber threat: phishing.
