Cut Through Noise for Faster Response

Your Problem.

Not all phish are created equal. How do you stop the most dangerous attacks faster? Your security team needs to identify these threats missed by your email security controls quickly and easily.

Our Solution.

With Cofense Triage, prioritize and remediate phishing threats faster. A culture of user-reporting is key to stopping phishing attacks, but your overburdened SOC team needs to prioritize what's reported. Instead of slowing their efforts with timeconsuming manual processes—the numerous steps required to find and understand real indicators of threats—automate analysis with Cofense Triage and focus on making decisions to speed remediation.

Cofense Triage accelerates phishing email identification and mitigation.

Detect Faster.

When users report emails, you need to search for relevant indicators of a phishing threat. Cofense Triage leverages the intelligence and insight of millions of human sensors to automatically identify real threats that have reached user inboxes.

Detect the Threat.

Cofense Triage clusters reported emails - even advanced polymorphic attacks - on threat payload to identify entire phishing campaigns that threaten your users.

Respond Automatically.

With Triggers and Playbooks, you can automate away manual tasks and free up your analysts for more important duties. Cofense Triage responds to users to encourage a virtuous cycle of human detection and reporting.

How Cofense Triage Works.

Cofense Triage gives operators the ability to act on all alerts quickly by automating threat qualification and investigation. SOC teams can focus on interpreting results and responding to phishing threats effectively.

Rule the Inbox.

As soon as a suspicious email gets reported, thousands of intelligence-driven YARA rules automatically assess the report, clustering it with reports containing similar payloads, and surfacing the highest priority threats for immediate action. Don't know or use YARA in your organization? Not to worry, we added Triggers which are easier to build, so any SOC team member can get in and begin automating.

Speed Your Analysis.

Cofense Triage includes powerful tools to give you a 360-degree view of phishing emails - headers, URLs, attachments, and a robust hex viewer. With optional 3rd party integrations, such as Virus Total, analysts can bring to bear a vast array of threat intelligence to determine the exact nature of the attack.

Integrate and Automate.

Cofense Triage can export report data to your SIEM; send alerts and events to your incident management, ticketing, or other logging systems; and integrate with your SOAR through an extensive API.

Partner with Experts.

Stopping phish isn't always straightforward. That's why Cofense Triage makes it easy to get on-demand help from our expert analyts in the Phishing Defense Center. They're just one click away at anytime.
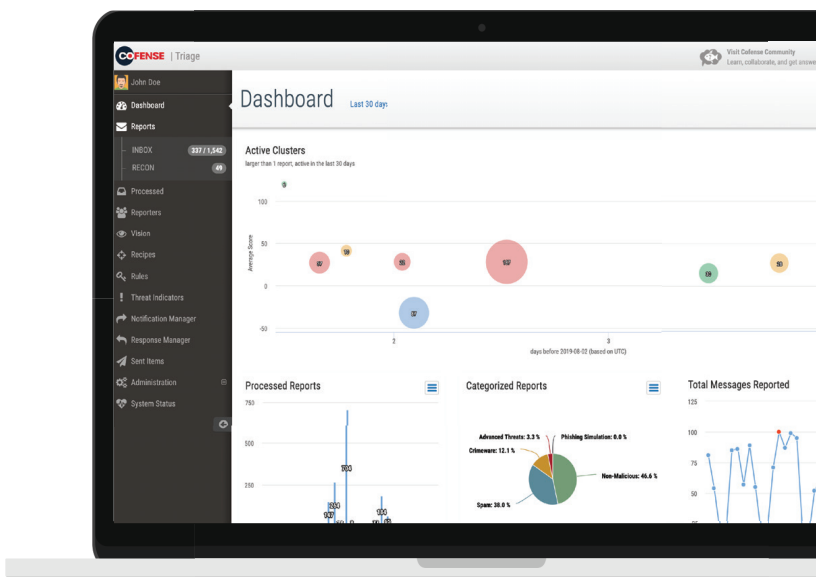

Power Up with Cofense VisionTM.

User-reported emails are a rich source of intelligence, but what about all the users who don't report a phish? Integrating Cofense Vision with Triage provides rapid search and mitigation to contain the threats lurking in your email environment. And with AutoQ Respond, once the fingerprint of an attack is identified, future attacks can be automatically stopped in their tracks.

Fast and reliable phishing threat hunting, all from a single console.
