All organizations need to educate their employees about cyber security risks. That’s why Cofense developed a fully-functional Learning Management System to help administrators manage content and ongoing education. Cofense LMS was developed to reinforce the behavioral conditioning and experiential learning delivered in Cofense PhishMe with the ability to expand training in areas of security and compliance important to your company. With Cofense LMS, companies can easily upload additional content for a fully-personalized catalog and experience.

Make It Your Own
Make your employees feel at home. Leverage your company’s branding by adding your logos or color schemes to the LMS.

Register Hassle-Free
Your employees have busy schedules. That’s why we’ve made it simple for users to self-register.

Choose Your Own Courses
Use the default course progression provided by Cofense, or make your own your own path using the provided modules.

Why Choose Cofense LMS?

Don’t Lose Time Installing Modules
The full set of CBFree modules is included with the LMS at no extra cost. With no time lost uploading the lessons, your users can get started right away.

Keep Tabs on Progress
Make sure your employees are getting the most out of the learning experience. Keep track of which employees have started, completed, or have not yet started their assigned modules.

Import Your Own Content
Does your organization already use its own CBT modules? No problem. Import your own lessons and manage your Cofense and non-PhishMe learning materials in one place.

Assess Knowledge
Each pre-installed module includes an interactive learning activity, allowing users to gauge their understanding of the topic. Results can be exported in a machine-readable format.
The LMS is client-owned, which means your organization must appoint its own LMS Training Administrator. The responsibilities of the Administrator include:

- Managing the LMS
- User Management
- Course Management
- Reports Management
- Overseeing self-registration
- Updating courses
- Running reports
- Manually registering some users
- Managing group enrollments for new courses
- Distributing reports
- Resolving credential issues
- Adding activities
- Enrolling or un-enrolling

Hands-Off Reengagement

Rather than manually tracking users who have not yet completed their assigned activities, you can use reengagement emails.

Reengagement emails remind students to return to a course or complete an activity at a specified time. Create your own on-brand templates with the WYSIWYG HTML Editor and keep your users engaged.

Managing the LMS

The LMS is client-owned, which means your organization must appoint its own LMS Training Administrator. The responsibilities of the Administrator include:

<table>
<thead>
<tr>
<th>User Management</th>
<th>Course Management</th>
<th>Reports Management</th>
</tr>
</thead>
<tbody>
<tr>
<td>Overseeing self-registration</td>
<td>Updating courses</td>
<td>Running reports</td>
</tr>
