Cofense Intelligence is a one-of-a-kind phishing-specific intelligence service designed to help companies identify and prevent dangerous malware and phishing attacks. Cofense’s machine readable threat intelligence (MRTI) service is 100% human-verified with no false positives, which allows organizations to confidentially block activity without fear of disrupting the business.

Cofense Intelligence uses proprietary methods to automatically identify threats to the enterprise and provides security teams with timely, actionable intelligence to respond to attacks that would otherwise go undetected. In addition, the intelligence service contains rich contextual insight into attacker tactics, techniques, and procedures to help security teams understand malware patterns. By integrating Cofense Intelligence with SIEMs, security teams are able to quickly identify true threats and take the correct action. The end result is continuous monitoring and mitigation capabilities that better leverage their infrastructure investments and optimize IT resources through automation.

Cofense Triage is the first phishing-specific incident response platform that allows security operations and incident responders to automate the identification, remediation, and sharing of phishing threats. Cofense Triage provides incident responders with in-depth visibility into email-based attacks occurring against their organization in near real-time. Triage operationalizes the collection and prioritization of employee-reported threats and seamlessly integrates with Cofense Reporter™.

Armed with Cofense’s solution and integrated into existing security investments, security leaders strengthen their security posture through preparation, intelligence, and an automated incident response workflow.
Cofense PhishMe® - Reducing Employee Susceptibility to Phishing

Cofense PhishMe is a security industry award-winning phishing simulation solution designed to prepare employees against attackers attempting to bypass technology and exploit humans.

PhishMe is a software-as-a-service (SaaS) enterprise-grade solution for organizations to regularly immerse employees in phishing scenarios. Employees receive personalized emails to learn what phishing attacks look like and to be conditioned to report suspicious email. Employees who click on the mock phish are presented with brief, in-the-moment education to outline the phishing characteristics. Cofense PhishMe has reduced employee susceptibility to spear phishing by up to 95 percent - preparing the human line of defense.
