

Cofense Intelligence provides accurate and timely alerts to strengthen your organization's ability to quickly identify and respond to phishing attacks in progress.

We receive more than a million messages daily from a wide variety of sources. Attacks are automatically dissected to determine relationships between them. Our unique clustering algorithms sort malicious emails based on a number of factors and watch for new and emerging threats in the form of emails containing dangerous links and/or attachments. Once a new threat cluster is identified, its characteristics are documented and updated in our threat repository.

Payloads for each confirmed phishing campaign are analyzed using proprietary methods to determine nature of each threat. This information is updated in our data mines for analysis across campaigns and time-frames. Threat intelligence derived from this analysis is published in multiple formats for your security teams and security infrastructure to consume and appropriately respond.

This proactive approach of threat analysis enables you to prime your existing security infrastructure to disrupt these potentially nefarious attacks. Attack tactics used to penetrate your network are also exposed along with the relationships between phishing campaigns and Indicators of Compromise (IOCs). The combination of actionable threat intelligence and understanding the correlation between phishing attacks and their motivators helps your team prioritize, investigate, and respond.

Key Benefits

- ✓ Timely, Accurate, and Actionable Phishing Threat Intelligence
- ✓ Consumable Phishing Threat Intelligence
- ✓ Expert threat analysts to help operationalize threat intelligence and provide guidance
- ✓ Attack analysis and context to help make rapid, informed decisions

What is Cofense Intelligence™?

Cofense Intelligence is the leading cyber security service designed to help enterprises stop dangerous malware and phishing attacks. We use proprietary methods to automatically identify top threats to your enterprise, and provide you with timely actionable intelligence, tools, and coaching to respond to attacks that would otherwise go undetected.

Email attacks are the primary mechanism to deploy malware into enterprises, either directly or indirectly. Phishing emails with malicious attachments or links continue to be able to bypass most organizations' security stack and reach the end user.

Most security vendors wait until a threat is at your doorstep before they analyze it and declare it as malicious. Consequently, there is a delay between when an attack is launched and when your enterprise finally has reliable information about it. Since each threat is investigated in isolation, all threats are reported as equals without any context about the attack or related attacks.

Cofense takes a fundamentally different approach in identifying threats as they emerge daily—before your network gets hit.

Cofense's unique security intelligence gives you the weapons you need to identify, block, and investigate threats hitting your enterprise daily. This precise information is available in multiple forms for your teams to prepare and respond to active attacks to your network.

- Human-readable threat intelligence reports provide deep-dive and trending analysis of your biggest threats. These reports include our expert analysis of the attack methodology.
- Machine-readable threat intelligence (MRTI) that can feed directly into security devices and threat repositories. Firewalls, IDS/IPS, SIEM can now detect and block emerging threats at the earliest stages of the attack.
- SaaS investigation apps to investigate phishing and malware attacks. These on-demand tools provide the latest insight on which attacks are related and how the attacks are being executed.
- Expert guidance from Cofense's world-class security team to implement best practices to reduce threats against your network.

"We process Cofense reports first because we know if you're reporting it, it's bad. Cofense Intelligence is the most accurate phishing threat info we receive and it's easy to consume."

Threat Analyst at a Large Financial Organization

Cofense Intelligence is actionable because it is:

Consumable	Cofense Intelligence delivers threat intelligence in multiple forms. Machine-readable threat intelligence (MRTI) follows industry standards for quick integration with your existing security devices. Analysis reports in PDF and HTML format are optimized for threat analysts and incident response teams.
Reliable	Cofense Intelligence only notifies customers about confirmed threats that are vetted by our trained analysts, resulting in high-signal intelligence.
Timely	MRTI is published throughout the day as new attacks are confirmed. Strategic analysis reports are published weekly. The investigation app is available 24x7x365.
Fresh	Cofense Intelligence service derives threat intelligence from a variety of sources of malicious email and spam that are used to deliver dangerous payloads to your employees every day.
Contextual	Cofense Intelligence publishes threat intelligence that shows how individual elements of an attack are related and the relationships between seemingly disparate attacks.
User-friendly	We will help you operationalize the service and provide on-going support to make sure you are getting the most from the service.

Cofense™, formerly known as PhishMe®, is the leading provider of human-driven phishing defense solutions for organizations concerned with their susceptibility to sophisticated cyber attacks. Cofense delivers a collaborative, cooperative approach to cybersecurity by enabling organization-wide response to the most used attack vector—phishing. Cofense serves customers of all sizes across multiple industries including financial services, energy, government, healthcare, technology and manufacturing, as well as other Global 1000 entities that understand how engaging user behavior will improve security, aid incident response and reduce the risk of compromise.
