

Phishing threats get past the perimeter every day.

You might think that if automation covers 90% of phishing threats, your organization is well protected. But the Cofense™ Phishing Defense Center (PDC) verifies that as many as 1 in 7 emails reported by customers are malicious:

- 55,404 credential harvesting attacks designed to exploit SSO architecture
- 25,501 campaigns hiding malicious files inside cloud services to avoid gateway detection
- 4,152 impersonation attacks attempting to steal funds from an organization

Source: Phishing Defense Center 2018

These emails bypassed perimeter defenses, such as email gateways, to become ticking bombs in employees' mail boxes.

Key Benefits

- ✓ Get actionable indicators on threats in progress on YOUR network
- ✓ Respond to verified threats immediately and decisively
- ✓ Sharply reduce the time between detection and resolution
- ✓ Receive alerts to identified threats, within the hour, throughout the day
- ✓ Coordinate response: plug our intelligence into your SIEM or orchestration solution

Quickly stop threats as they spread in your network.

When your employees report suspicious emails, the Cofense PDC analyzes them and delivers high-priority threat indicators directly to your team, enabling your team to respond immediately—as a phishing attack is morphing in your environment.

We are dedicated phishing analysts locked in on phishing threats. Backed by the Cofense Research and Threat Intelligence teams, we apply findings from our global customer base to see what other don't. When a threat actor probes your network, our analysts recognize indicators, nuanced signs of danger, your busy security operations team may miss. By alerting you right away, we can prevent a full-blown emergency from erupting later on.

Receive actionable indicators on active threats, within the hour.

The intelligence we supply comes straight from your environment, from suspicious emails reported by your users. Our analysts deliver indicators of compromise (IOC's), adding context and insight so your response team can:

- Assess the priority and understand the full scale of the problem
- Communicate upstream to the other members of your security team or through your SIEM
- Determine the best course of action to respond to the threat

Our analysts draw on deep experience to provide intelligence you can act on NOW. Their intelligence empowers faster, more effective decisions. It's the difference between stopping an attack in minutes, not days.

Spend your time mitigating threats, not gathering data.

The Cofense PDC relieves security operators of the repetitive tasks needed to qualify, investigate, and document alerts. You can focus on responding to verified threats, instead of spending your limited time and resources on data gathering. We take the workload off your staff, giving them an army to qualify and investigate threats and understand their severity. Your team can focus on fighting attacks, rather than digging for them.

Sharply reduce the time between threat detection and resolution.

Unlike other services the Cofense PDC supports your team from alert to resolution. We combine the power of user email reporting with our PDC expertise, significantly improving the meantime to detect and respond to active threats already inside your organization.

Cofense™, formerly known as PhishMe®, is the leading provider of human-driven phishing defense solutions for organizations concerned with their susceptibility to sophisticated cyber attacks. Cofense delivers a collaborative, cooperative approach to cybersecurity by enabling organization-wide response to the most used attack vector—phishing. Cofense serves customers of all sizes across multiple industries including financial services, energy, government, healthcare, technology and manufacturing, as well as other Global 1000 entities that understand how engaging user behavior will improve security, aid incident response and reduce the risk of compromise.
