

# Cofense PhishMe™ Certification

BUILD AND RUN A SUCCESSFUL ANTI-PHISHING PROGRAM

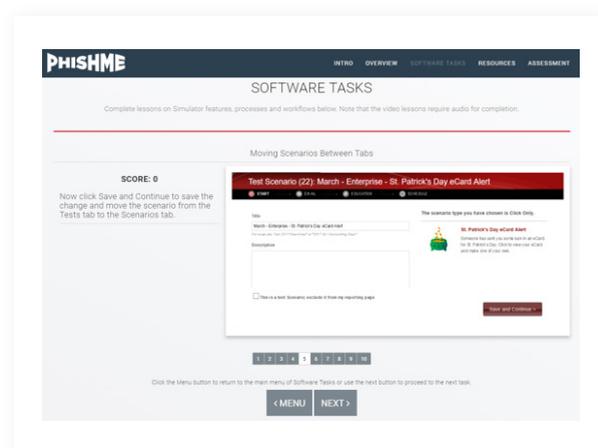

Phishing attacks aren't slowing down. To block their malicious content—ransomware, other malware, and business email compromise (BEC)—you need to mobilize users across your organization. These living, breathing targets are your last line of defense.

Conditioning their behavior requires skill and knowledge. For example, choosing the right scenario to run in phishing simulations takes careful planning. Before you devise your next round of training, it's essential to know the evolving techniques phishing attackers use. Employees can't stop real threats unless they've seen them first.

With Cofense PhishMe Certification, you will possess the knowledge to build, run, and sustain a successful anti-phishing training program. You'll also become an expert at using Cofense PhishMe to help employees recognize and report suspicious emails.

## Overview

The certification program features three modules. Each offers multiple areas of study and assessments. Most users take 4 hours to complete the program. You can self-report to get ISC(2) credits. To accommodate your schedule, the course is self-paced and automatically bookmarks your progress, so you can later start where you left off. Once you have passed all assessments, you can download a certificate of completion and add the certification to your LinkedIn profile. Certification lasts for 2 years.

## Why Cofense PHISHME ?

Cofense PhishMe is the leader in phishing awareness training. After all, we invented the industry and have helped train over 27 million users in 160 countries.

Our purpose-built SaaS platform conditions employees to know a phish when they see a phish. Employees also learn to report potential phishing emails, providing real-time threat intelligence to incident responders. The

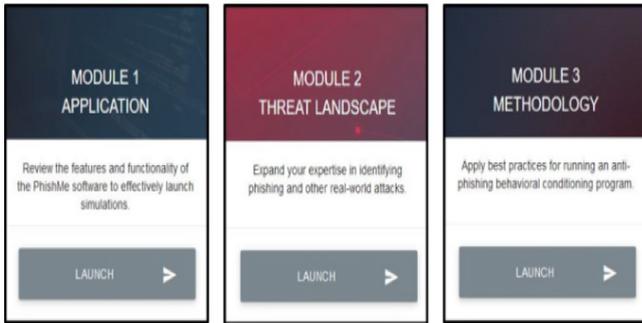

solution's customizable scenarios make it easy to mimic emerging threats and keep your training relevant.

For two consecutive years, Gartner has named Cofense a Leader in the Computer-Based Security Awareness Magic Quadrant. Now we're offering customers the opportunity to get Cofense PhishMe-certified.

“Strong security awareness and phishing simulation programs are proven to reduce end user susceptibility. Become PhishMe certified and become an all-star.”

**Rohyt Belani, CEO and Co-Founder, Cofense**

## Application Module

This module gives you an overview of the Dashboard and Community resources. You'll learn to launch a campaign and manage reporting and analytics. You will also understand how to edit phishing scenarios, including creating and administering scenarios and providing relevant user education.

## Threat Landscape

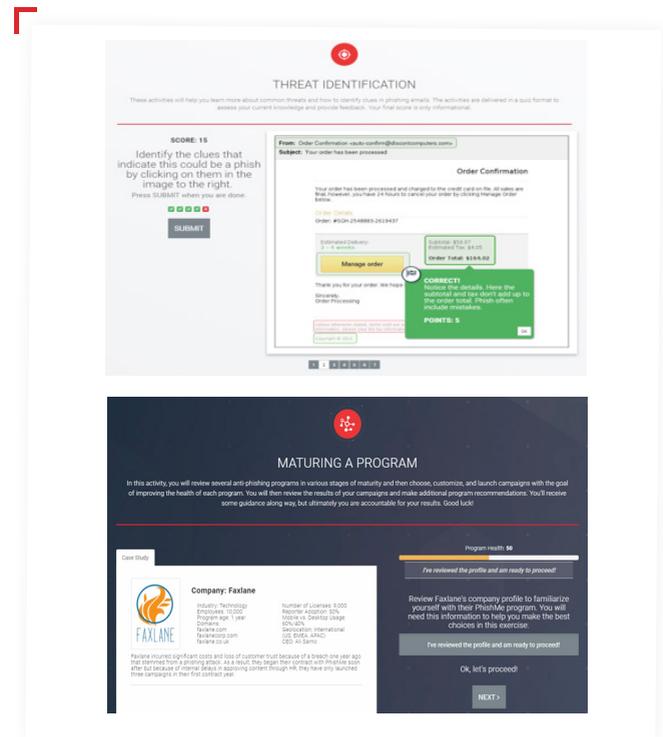

Cyber-security threats are constantly evolving, thanks to new techniques and attack vectors. This module will deepen your knowledge of the phishing threat landscape, which in turn helps develop effective simulations and educational content.

## Methodology

Discover best practices for running an anti-phishing program, regardless of how mature your program is. We'll share with you tips and tricks Cofense has learned through hands-on experience with Fortune 100 companies and SMB's alike.

Note that this course was designed for operators that are less experienced with using the PhishMe software and running an anti-phishing program. More experienced operators will find the course to be great review.

Cofense™, formerly known as PhishMe®, is the leading provider of human-driven phishing defense solutions for organizations concerned with their susceptibility to sophisticated cyber attacks. Cofense delivers a collaborative, cooperative approach to cybersecurity by enabling organization-wide response to the most used attack vector—phishing. Cofense serves customers of all sizes across multiple industries including financial services, energy, government, healthcare, technology and manufacturing, as well as other Global 1000 entities that understand how engaging user behavior will improve security, aid incident response and reduce the risk of compromise.
