

Cofense Vision™

QUARANTINE PHISHING ATTACKS IN PROGRESS

Unfortunately, the truth is phishing works. If your company gets hit with a massive attack, and you have amazingly trained employees who report it immediately... **great!** But what happens to the unreported emails? Do they just sit in an inbox waiting for someone to open them accidentally and expose the threat? How do you get ahead of the threat?

With Cofense Vision™ this is no longer an issue.

FIND THE ENTIRE PHISHING CAMPAIGN.

Cofense Vision stores, indexes, and enriches a moving window of emails in a client environment. Using the Cofense Vision Discover feature, security operations teams are able to find the full breadth of an attack, quickly and efficiently.

Cofense Vision Discover can precisely determine all of the messages that are part of a phishing campaign across your ENTIRE organization. It searches all of the messages that meet a set of criteria, so operators can quickly find the emails, quarantine, and mitigate the threat.

DIG DEEPER.

Messages stored in Cofense Vision can be queried based upon Sender, Subject and Date, which Microsoft offers today, but they can be further queried with criteria beyond what is available via Microsoft's API. As threat actors alter their techniques, operators can start hunting for similar items, and quickly find and mitigate attacks with similar patterns. The key to managing a phishing threat is being able to determine where that email is lurking in your email server.

END THE THREAT.

Once the threat is detected, Cofense Vision Quarantine can rapidly isolate the messages in the Microsoft Exchange or Office 365 mailboxes. A simple click will quarantine the bad messages in Microsoft Exchange and Office 365 from all user inboxes, without disrupting your organization's day-to-day activities.

Key Benefits

- ✓ Fast detection of threats
- ✓ One-click quarantine of malicious messages
- ✓ Part of Cofense's Phishing Security Orchestration, Automation and Response (SOAR) platform to help organizations deal with phishing threats
- ✓ Faster incident response and mitigation
- ✓ Ability to orchestrate analysis, automate remediation tasks, and quickly respond to the threats

Find the Entire Campaign and Dig Deeper with Cofense Vision
