

Managed Phishing Detection and Response

By the Cofense Phishing Defense Center

Your Challenge

We get it. With 90% of breaches beginning with an email phish, phishing defense has become a critical business issue. What's more, the typical SOC analyst is overwhelmed with security alerts and can investigate only about 50% of those. Organizations need a solution that can quickly detect and automatically quarantine threats, so phishing attacks can be stopped in minutes versus hours or days.

Our Solution

At Cofense, we provide a one-of-a-kind Managed Phishing Detection and Response (PDR) service delivered by our security experts in the Cofense Phishing Defense Center (PDC). The Managed PDR service is ideal for organizations who lack the in-house expertise or resources to effectively defend and remediate against phishing attacks. Cofense PDC experts can detect and stop attacks to your network in as little as 8 minutes. Also, as a Managed PDR customer, you benefit from the intelligence of our 25 million global users, enabling us to identify and remove phishing attacks in your network before they are even reported.

The Cofense PDR platform empowers organizations to use their strongest defense – people – alongside our automated response and intelligence technology to achieve the most comprehensive phishing response and detection available.

Cofense Managed PDR is:

High Fidelity Threat Intelligence

Access a global network of more than 40 security analysts, leveraging the latest human-vetted phishing threat intelligence to quickly identify and eradicate threats in your environment. This includes protection from zero-day phishing attacks, intelligence from over 3 million suspicious emails and 300,000 PDC analyst investigations each year, and a 99.999% categorization accuracy.

Threat Remediation

In a matter of minutes, not days or weeks, phishing attacks are identified and quickly removed from your environment before a successful attack can occur. In fact, with the Cofense PDC's rapid detection, the median time to analyze, respond, and remediate is about 60 minutes, with some phishing attacks stopped in as little as 8 minutes.

Threat Hunting

Our security analysts leverage in-depth threat intelligence to proactively investigate and identify active phishing threats and threat indicators in your environment.

Why Choose the Cofense Managed PDR Service

Cofense PDC analysts leverage 24/7 threat intelligence, curated from millions of emails per week observed in other organizations, to significantly reduce the average time to detect and respond to active threats. As part of what we call the “network effect”, Managed PDR customers contribute to and benefit from being part of the Cofense phishing defense network – 25 million strong: when a threat is reported, all customers benefit.

Benefits of Cofense Managed PDR:

Uses Cofense proprietary technology to aid the reporting and response of realtime phishing campaigns targeting your organization

- Investigates all suspicious emails reported by your employees
- Leverages a growing network of customers reporting suspicious emails
- Adds phishing expertise to your SOC capabilities.
- Significantly reduces your meantime to detect and respond to active attacks
- Integrates with your SOC for efficiency and effective response
- Provides actionable intelligence based on analysis of phishing emails

With Cofense Managed PDR, you are notified immediately after a malicious email has been identified by a PDC analyst. You'll also receive a detailed escalation report that provides threat context along with remediation recommendations. All first and second stage IOCs are made available via API, further enhancing a rapid response and mitigating an attacker's impact on your organization.

Our goal is to enable every company to defend itself against phishing threats. And with the strength of our global Cofense network and Managed PDR service, it just got a whole lot easier.

About Cofense

Cofense® is the leading provider of phishing detection and response solutions. Designed for enterprise organizations, the Cofense Phishing Detection and Response (PDR) platform leverages a global network of close to 30 million people actively reporting suspected phish, combined with advanced automation to stop phishing attacks faster and stay ahead of breaches. When deploying the full suite of Cofense solutions, organizations can educate employees on how to identify and report phish, detect phish in their environment and respond quickly to remediate threats. With seamless integration into most major TIPS, SIEMs, and SOARs, Cofense solutions easily align with existing security ecosystems. Across a broad set of Global 1000 enterprise customers, including defense, energy, financial services, healthcare and manufacturing sectors, Cofense understands how to improve security, aid incident response and reduce the risk of compromise.
